# PULSAR Portable

## Trailer

The modular plug-and-play design of the system is compatible with most existing speed or camera trailers, providing a versatile solution for various deployments. This force multiplier is a rapidly deployable ALPR solution that allows agencies to place it in hotspots for both short and long periods, effectively capturing vehicle license plate details. Vehicle capture and analysis are performed locally, with the results and vehicle images sent to POLARIS. Hotlist match alerts are displayed in POLARIS, enabling quick validation and action. The system is deployable with two ALPR cameras, allowing it to capture vehicle traffic in two different directions across two lanes.

- Modular plug and play design, compatible with most existing speed or camera trailers.
- Force multiplier – rapid deployable ALPR solution, that allows agencies to place in hotspots for short or long periods of time to capture vehicle license plate details.
- Vehicle capture and analysis are performed locally and the results along with the vehicle image are sent to POLARIS.

- Hotlist match alerts are displayed in POLARIS allowing quick validation and action
- Deployable with 2 ALPR cameras for capturing two lanes of vehicle traffic in two different directions
